EDUCATION

Bachelor of Science in Computer Science

NEMSU, Poblacion, Lianga, Surigao del Sur | June 2026

TECHNICAL SKILLS

- PHP, Python, JavaScript
- MySQL, PostgreSQL
- Git and GitHub
- React.js, Laravel, Tailwind CSS
- Docker, GitHub CLI
- Photoshop

PROJECTS

Gamified Civil Service Mock Reviewer Utilizing the Free Spaced Repetition Scheduler (FSRS) Algorithm to Improve Memory Retention | September 2025 – June 2026

Full-stack Developer | Flutter, Dart, ObjectBox | Not uploaded online

- I have built a gamified mock reviewer app that can help the user learn while enjoying. The app helps the users to focus on their weak points with the help of FSRS for scheduling topics based on user performance. It helps with students, Job Order Personnel and people that are planning to take a civil service exam.
- Developed the gamified mobile mock reviewer using Flutter/Dart, implementing FSRS-based spaced repetition for adaptive review scheduling and a Reinforcement Learning (RL) engine for personalized XP, points, and coin rewards.
- Evaluated the system across 715 review sessions; FSRS achieved 0.1213 RMSE in retrievability prediction, while usability testing produced a 4.59/5.00 overall satisfaction mean.

Library Attendance System - NEMSU | January 2026 - May 2026

Full-stack Developer | PHP, Tailwind CSS, MySQL, JavaScript | Not uploaded online

- Library attendance system used to solve the manual attendance logs on to our university. The system uses barcode scanner to automatically log the student/instructor in the system. The system can generate reports and library ID as well.
- A technical challenge I encountered while building the system was the integration of the ID generator, particularly in designing a proper ID layout and maintaining good output quality. To address this, I created a standardized ID template with fixed dimensions, properly positioned elements, and optimized image and text rendering. I also implemented a print-ready generation process to ensure that the generated IDs remained clear and properly aligned when printed. Through testing and refinement, I was able to produce consistent and high-quality ID outputs while reducing manual adjustments.
- Tested ID generation using different user data and verified barcode readability, layout consistency, and print quality; deployed the system for university library use to automate attendance logging and reduce manual recordkeeping.

CERTIFICATIONS

Certificate of Internship | Area 51 Information Technology Services | August 11, 2025
